Copilot for Microsoft 365 Risk Assessment QuickStart Guide

- Risk Assessment QuickStart Guide

- An AI Risks and Mitigations Framework: This framework outlines the primary AI risk categories and how Microsoft addresses them at both company and service levels.

- Sample Risk Assessment: This presents a set of real customer-derived questions and answers to assess the service and its risk posture.

Additional language support for Copilot for Microsoft 365

- Copilot for Microsoft 365 will soon support an additional 12 languages: Bulgarian, Croatian, Estonian, Greek, Indonesian, Latvian, Lithuanian, Romanian, Serbian (Latin), Slovak, Slovenian and Vietnamese.

- Welsh and Catalan and are making improvements to the responses Copilot can provide for specific language variants including Dutch (Belgium), German (Switzerland), English (UK), Spanish (Mexico) and French (Canada).

- These language updates are rolling out in September.

End-user capabilities

IN2SUCCESS

Several improvements to Copilot for Microsoft 365 Graph-grounded chat are coming in September.

- In Outlook, Graph-grounded chat will be able to reason over a user's archive mailbox, expanding coverage to all the email content in their primary mailbox. Users will also be able to navigate to specific folders or sub-folders to get responses that prioritize emails in those folders

Pasting content becomes easier with Copilot in Word

Support student learning with solutions to quiz questions using Copilot in Forms

X **Incorrect** 5/10 Points

1. Determine the vertex of the quadratic function y = x^2 - 4x + 3.

○ (2, -1) ✓

○ (0, 5]

○ (3, 2)

◉ (1, 3)

Feedback: "Try to draw a graph. "

🎓 Answer explanation ⌃

To find the vertex of a quadratic function in the form $y = ax^2 + bx + c$, we can use the formula $x = -\frac{b}{2a}$.

In this case, we are given the function $y = 1x^2 - 4x + 3$. To find the vertex, we substitute the coefficients $a = 1$ and $b = -4$ into the formula:

$$x = -\frac{(-4)}{(2)(1)} = 2$$

Now, substitute $x = 2$ back into the original function to find the corresponding y value:

$$y = (2)^2 - 4(2) + 3 = -1$$

Therefore, the vertex of the parabola is $(2, -1)$.
